

KDAPT GenBI

USER ROLES & THEIR PRIVILEGES

KDAPT empowers teams with role-based access—ensuring the right people have the right level of control. From **Admins** who oversee the system to **Explorers** who consume insights, every role is designed to keep **data secure, consistent, and actionable**.

ADMIN

- **Full control** over the system.
- Manages **user accounts**, assigns roles, and sets **permissions**.
- Configures **data connections**, integrations, and **security policies**.
- Oversees **system usage**, **billing**, and **compliance**.
- Can do everything that the other roles can.

MODELER

- Builds and maintains the semantic/data models.
- Defines metrics, dimensions, and hierarchies for analysis.
- Ensures consistency of business logic across dashboards and queries.
- Cannot handle user management or system-level configurations like Admin.

ANALYST

- Works with dashboards, queries, and reports.
- Uses the semantic model created by Modelers to explore data.
- Can create and share visualizations, insights, and scheduled reports.
- No rights to change the underlying data model or system configuration.

EXPLORER

- **Basic/limited user role**.
- Can **access and view dashboards, reports, and shared insights**.
- May have **self-service query capability** (depending on permissions).
- Cannot build data models or manage other users.

'CUSTOM' ROLE

- Allows organizations to **create tailor-made roles** beyond the default (Admin, Analyst, Explorer, Modeler).
- Provides flexibility to **set specific privileges and access controls** aligned with business needs.
